WORK & RELEVANT EXPERIENCE

ICT Business Analyst (Internship)

Hubify Limited (ASX: HFY) | June – September 2025

- Collaborated with end users and stakeholders to gather and document detailed business requirements, supporting development of effective IT solutions.
- Led a ticket analysis project, identifying recurring issues and automation opportunities to reduce manual workload and improve response times.
- Analyzed current business processes and workflows, identifying inefficiencies and recommending process improvements to enhance operational performance.
- Assisted in project management activities, including planning, resource allocation, and timeline tracking using structured methodologies.
- Developed and executed comprehensive system test plans to ensure functional requirements and software quality before deployment.
- Developed clear functional specifications and data/process models to guide system developers and ensure alignment with business needs.
- Produced user manuals and training materials and facilitated training sessions with the teams to promote successful technology adoption across departments.
- Served as main contact between technical teams and users, enhancing communication and decision-making during software development lifecycle.
- Designed and deployed automation workflows, improving ticket resolution efficiency and contributing to service desk performance improvements.

Customer Service Consultant (CSC) & Wellbeing Carer (RAO)

Bupa Aged Care, Sutherland NSW | May 2024 – Present

Customer Service Consultant (CSC)

Reliable IT Solutions, 2A Boyle St, Sutherland, NSW, 2023

- Assisted in troubleshooting and resolving various IT issues for clients.
- Participated in the setup and maintenance of computer networks and systems.
- Contributed to IT project implementations under supervision.
- Gained firsthand experience with various hardware and software technologies.
- Assisted in creating technical documentation and user guides.

PROJECTS

Cloud Infrastructure Management Using AWS EC2

Designed and managed a cloud infrastructure using AWS EC2 to host a web application, focusing on high availability, security, and performance while keeping costs in check. I launched and configured the EC2 instance as a web server, monitored its performance with AWS CloudWatch, and set up security groups for network access.

My responsibilities included resizing the instance based on application demands and implementing termination protection to prevent accidental deletions. Throughout the project, I documented my processes and findings, which led to a comprehensive report on the procedures followed and challenges overcome. I successfully launched a fully functional web server, evaluated its termination protection, and presented my results to the class, receiving positive feedback and a High Distinction (HD) for my work.

Analysed and interpret annual financial report of an Australian Stock Exchange (ASX) listed company.

Analysed and interpreted the annual financial report of CSL Limited, an Australian Stock Exchange (ASX) listed company, focusing on its financial performance from 2019 to 2022. This involved conducting a trend analysis and calculating key financial ratios, including equity, profitability, and return on equity (ROE).

I assessed revenue, costs, and operating expenses to evaluate the company's fiscal health over the specified period. The analysis concluded with an evaluation of EBITDA, providing a comprehensive view of the company's performance and offering recommendations for enhancing financial outcomes.

Boutique E-commerce Website Development

Developed an innovative prototype boutique website using the WordPress platform, carefully integrating project requirements to create a visually appealing site that offers engaging user experiences. My design was catered to the latest trends and needs, ensuring a modern and user-friendly interface that effectively highlights the boutique's offerings to the customer's preferences.

Steganography and Access Control Implementation for Data Security

Implemented a robust data security solution by integrating steganography techniques for enhanced confidentiality and deploying access control mechanisms to enforce strict file permissions and access policies. Utilized advanced security measures to optimize both security and usability for effective data protection. I also leveraged special permissions such as SetUID, SetGID, and the Sticky bit to enhance privilege control, facilitate group collaboration, and maintain data integrity within a Unix-like operating system environment.

EDUCATION

Professional Year (9th October 2024 – 12th November 2025)
